The aim of the present study was to assess, in an ex vivo model, the effects of glucagon-like peptide-1 (GLP-1) or one of its analogues on the function of the bile canalicular membrane. For this purpose, bile canalicular membrane vesicles (BAMV), isolated from the hepatic bile canaliculi of adrenalectomized and cortisone-replaced adult male rats, were used. BAMV were exposed to radiolabeled taurocholate (TC) and the biliary formation of the polar and non-polar components of TC was determined. At 300 nM, GLP-1 strongly inhibited the TC-stimulated transport of non-polar TC (86% inhibition). In contrast, when the level of GLP-1 was increased, the inhibitory effect was more pronounced. The inhibitory effects of GLP-1 were mimicked by the GLP-1 analogue, liraglutide, and the effects of GLP-1 were reproduced by the GLP-1 receptor agonist, exendin-4. GLP-1 analogues may therefore be of potential therapeutic interest in cholestatic liver disease.Q: What is the relationship between nfs and home directories? I recently installed Ubuntu and didn't know what the configuration is for my home directory. My friend told me about the NFS, was I suppose to set it up so it accesses my NFS directory? We have already enrolled ~950 subjects at six sites (Louisville, Lexington, Denver, Tampa, San Diego, and Florida) and have received biosamples from all, except Louisville. The Louisville site, a minority-serving clinic, just opened a year ago and has produced an initial cohort of 36 subjects. Over the past few years we have learned a great deal about enrollment and retention of subjects in this trial, and we believe we can approach the science goals of this study efficiently using the Louisville site. Thus, the goal of this proposal is to develop the Louisville site to be a full-fledged clinical trial site by final year 0cc13bf012
