Video Conversion Wizard is a useful application for the users who need to convert various video formats. It has an intuitive interface and is easy to use, but there is a lack of the options that you are used to find in other video conversion tools. If you need to convert your videos to a specific format, this is your choice. You can use this program to convert your video files into virtually any video format, including AVI, MPEG, ASF, WMV, MP4, VOB, MOV, MKV, 3GP, and 3G2. It is possible to have a video file as an input and have the output be in another video format. You can specify the video quality, audio format, video and audio bit rates, frame rates, the need to enable subtitles, and other video and audio settings. You can efficiently convert video files to many different video formats, such as MPEG-4, AVI, 3GP, MP4, MOV, M4V, ASF, WMV, and so on. Additionally, you can create your own video files from various sources and easily edit them. You can use your video editor to create an archive, and then choose the video format, as well as the default settings, the clock of the video, the audio, subtitles, and other parameters. You can decide the dimensions of the output file and specify the audio format, audio bitrate, video bitrate, subtitles, and other settings. You can also set the duration of the resulting video files, and you can also set the aspect ratio. The converter does a good job of processing videos and does not encounter any errors during our tests. However, we have not been able to create a video from the source file (avi) and save it as mp4, avi, and so on. The output file is always larger than the source file. XL Video Converter is not an easy program to use. Although it has a good interface, it has some basic features we would like to see and other
